

Diving into Mastery

# Improper Fractions to Mixed Numbers

# Diving into Mastery Guidance for Educators

Each activity sheet is split into three sections, diving, deeper and deepest, which are represented by the following icons:

**Diving**

**Deeper**

**Deepest**

These carefully designed activities take your children through a learning journey, initially ensuring they are fluent with the key concept being taught; then applying this to a range of reasoning and problem-solving activities.

These sheets might not necessarily be used in a linear way. Some children might begin at the 'Deeper' section and in fact, others may 'dive straight in' to the 'Deepest' section if they have already mastered the skill and are applying this to show their depth of understanding.

# Aim

- Recognise mixed numbers and improper fractions and convert from one form to the other and write mathematical statements  $>1$  as a mixed number.

Colour the bar models to represent the fraction shown and then complete the statement converting the improper fraction into a mixed number.

$$\frac{7}{3}$$

$\frac{7}{3}$  is equivalent to  $2\frac{1}{3}$ .

Colour the fraction shown and then complete the sentence converting the improper fractions to a mixed number.

$$\frac{7}{4}$$

$\frac{7}{4}$  is the same value as  $1\frac{3}{4}$ .

Colour the fraction shown and then complete the sentence converting the improper fractions to a mixed number.

$$\frac{22}{6}$$

$\frac{22}{6}$  is equivalent to  $3\frac{4}{6}$ .

Now, convert these improper fractions to mixed numbers.

$$\frac{15}{2}$$

$$=$$

$$7\frac{1}{2}$$

$$\frac{14}{6}$$

$$=$$

$$2\frac{2}{6}$$

$$\frac{19}{5}$$

$$=$$

$$3\frac{4}{5}$$

$$\frac{21}{4}$$

$$=$$

$$5\frac{1}{4}$$

Timmy has converted some mixed numbers into improper fractions.

Can you spot the mistakes he has made? Explain Timmy's mistakes and work out the correct answers.

$$\frac{7}{3} = 2 \frac{2}{3}$$

**The fraction in the mixed number is incorrect. The answer should be  $2\frac{1}{3}$ .**

$$\frac{11}{5} = 10 \frac{1}{5}$$

**This is incorrect as 10 fifths make 2 whole ones. The answer should be  $2\frac{1}{5}$ .**

$$\frac{17}{4} = 3 \frac{5}{4}$$

**This is incorrect as it still includes an improper fraction. The answer should be  $4\frac{1}{4}$ .**

What could be the values of A and B be? Find all the possibilities.

$$\frac{A}{4} = 2\frac{B}{4}$$

There are 3 possible answers:

$$A = 9, B = 1$$

$$A = 10, B = 2$$

$$A = 11, B = 3$$

What could be the values of A and B? Find three possibilities.

$$\frac{A}{5} = B \frac{1}{5}$$

$$A = 6, B = 1$$

$$A = 11, B = 2$$

$$A = 16, B = 3$$

Other answers are possible.

A should be 1 more than  $B \times 5$ .

Franco has created improper fractions and equivalent mixed numbers using number tiles, but he has knocked some of the tiles and can't remember where to put them.

Can you place the following numbers in the correct places to complete the mathematical statements? (Each tile can only be used once.)

$$\frac{\boxed{5}}{\boxed{2}} = \boxed{2} \frac{\boxed{1}}{\boxed{2}}$$

$$\frac{\boxed{19}}{\boxed{4}} = \boxed{4} \frac{\boxed{3}}{\boxed{4}}$$

# Improper Fractions to Mixed Numbers

Dive in by completing your own activity!

1) What co  
 $\frac{5}{2} = 2\frac{1}{2}$

2) What co  
 $\frac{5}{2} = 2\frac{1}{2}$

3) Franco hi  
of the tile  
complete

a)  $\frac{1}{4}$

b)  $\frac{1}{5}$

c)  $\frac{1}{2}$

1) Henri sa  
Explain w

2) Timmy h  
Timmy's

a)  $\frac{14}{5} =$

b)  $\frac{11}{3} =$

c)  $\frac{17}{4} =$

1) Colour the bar models to represent the fractions shown and then complete the statements converting the improper fractions into mixed numbers.

a)  $\frac{5}{2}$  is equivalent to \_\_\_\_\_

b)  $\frac{8}{3}$  is equivalent to \_\_\_\_\_

c)  $\frac{16}{3}$  is equivalent to \_\_\_\_\_

2) Now, convert these improper fractions into mixed numbers. Use drawings or cubes to help you, if needed.

a)  $\frac{13}{6} =$

b)  $\frac{16}{4} =$

c)  $\frac{22}{5} =$

d)  $\frac{17}{3} =$

# Need Planning to Complement this Resource?

## National Curriculum Aim

Recognise mixed numbers and improper fractions and convert from one form to the other and write mathematical statements  $>1$  as a mixed number.

For more planning resources to support this aim, [click here](#).

The screenshot shows two resource cards. The first is titled 'Improper Fractions' and features a sailboat illustration. It lists several improper fractions:  $\frac{4}{2}$ ,  $\frac{10}{4}$ ,  $\frac{15}{9}$ , and  $\frac{50}{40}$ . The second card is titled 'Mixed Number to Improper' and features a calculator illustration. It explains how to convert mixed numbers to improper fractions and includes a calculator interface with a 'twinkl' logo.

The screenshot shows two resource cards. The first is titled 'Food Fractions' and features a pizza illustration. It includes a number line and several fractions:  $\frac{5}{6}$ ,  $\frac{4}{6}$ ,  $\frac{9}{6}$ , and  $1\frac{3}{6}$ . The second card is titled 'Fraction Party' and features a person illustration. It includes a 'Party Time' section with a text box and a 'twinkl planit' logo.

Twinkl PlanIt is our award-winning scheme of work with over 4000 resources.
