

$106 - 93 =$

First you need to draw the number line with the smallest number at the beginning. This is because you are going to count up to find the difference.

First Frog will need to jump to the next 10. The next 10 is 100 so Frog jumps 8 places.

Then Frog needs to jump to 106. This means Frog is jumping 6 spaces.

Finally, you need to add the two jumps together.

$$7 + 6 = 13$$

$$106 - 93 = 13$$

Complete the following calculations:

1.  $108 - 96 =$

2.  $104 - 91 =$

3.  $107 - 85 =$

4.  $111 - 89 =$

5.  $104 - 78 =$

6.  $103 - 72 =$

7.  $115 - 88 =$

8.  $121 - 99 =$
