

Today you are going to be looking at division with remainders.

When looking at the divisions above, we know that 76 is not in the 10x table. However, we know that 70 is.

$$70 \div 10 = 7$$

This means we have 6 left over as we only divided 10 by 10. We can write this as 7 r 6.

The 'r' stands for remainder. This means what is left over after the division.

Have a go at the following calculations:

1. $84 \div 10 =$

2. $23 \div 3 =$

3. $23 \div 4 =$

4. $27 \div 4 =$

5. $29 \div 3 =$

6. $17 \div 3 =$

7. $19 \div 4 =$

8. $11 \div 3 =$

9. $18 \div 4 =$

10. $21 \div 4 =$
